Post-operative Rehabilitation Protocol

Shoulder Arthroscopic Debridement

General Guidelines

- Supervised physical therapy should begin 10-14 days after surgery
- You will be wearing sling full time for minimum 4 weeks
- No resisted elbow flexion or forearm supination until 8 weeks
- If concomitant rotator cuff repair performed, please follow rotator cuff protocol
- Contact therapist or physician for questions or concerns

| | Range of Motion | Immobilizer | Exercises |
|---|--|--|--|
| Protection Phase Weeks 0 - 1 | Elbow: PROM, AAROM, AROM as tolerated without resistance Shoulder: PROM, AAROM, AROM as tolerated | Sling w/ abduction pillow for comfort, Ok to remove for ROM exercise and hygiene | Ice: 20 minutes on, 20 minutes off every hour Exercises: Pendulum and grip strengthening. Elbow, wrist ROM |
| Therapy Phase 1 Weeks 1 - 2 | Increase as tolerated to full AROM | D/C sling as comfortable | <u>Exercises</u> : Begin deltoid/cuff isometrics with arm at side. No active biceps strengthening until 8 weeks. <u>Modalities</u> : Per therapist – E-stim, Ultrasound, heat (before), ice (after) |
| Therapy Phase 2 Weeks 2 - 6 | Advance to full, painless ROM | None | Exercises: Progress Phase 1 exercises. Begin eccentrically resisted motion and closed chain activities. Modalities: Per therapist – E-stim, Ultrasound, heat (before), ice (after) |
| Therapy Phase 3 Weeks 6+ Return to Sport | Full Painless ROM | None | Exercises: Plyometrics (e.g. weighted ball toss), Sports-specific training |
